Allowable Subject Matter

1. Claims 1-20 are allowed.
2. The following is a statement of reasons for the indication of allowable subject matter:

The present invention relates particularly to method and system for communicating, which use downlink signal bursts and uplink signal bursts having unequal time lengths to provide a guard times. The use of guard time to prevention collision of uplink and downlink caused by propagation delay is not new in the art. Further, prior art of record (closest reference, Hayashi et al. US 6,404,778) shows that the bursts length of the downlink and uplink could also be different. In the prior art of record, however, the guard time (guard bits) is included in the burst of the downlink and uplink. Prior art or record, taking individually or collectively, fails to fairly teach that the downlink bursts and the uplink bursts are intentionally made different to provide a guard time, which has a time length equal to the difference between the downlink bursts and the uplink bursts, as claimed in independent claims 1 and 13 (claims 2-12, 14-20 depend therefrom). Thus, claims 1-20 are found to be novel and unobvious over prior art of record.
